New Sierra Hybrid Celery from Terranova Seeds

Following 2 years of trials across all major growing regions of Australia, Terranova Seeds is pleased to advise that Sierra Hybrid Celery seed is now commercially available.

The variety comes out of the ever expanding range from ENZA Zaden and has proven to be a very consistent performer in the trial programme.

Trialled as TMX 1807, the key findings from the trial programme included;

- Sierra is best through spring, autumn and winter production where it's excellent harvest uniformity has proven a real benefit
- Sierra creates a tightly bunched plant which produces an extra long petiole length and the plant produces very few side shoots.

Seed of Sierra is available in pellet form only and can also be primed if required.

For further information on the new Sierra Hybrid Celery please contact your Terranova Seeds Territory Manager.
